

Bottle Filling Machine

A Bottle Filling Machine is an automated device used in industries like pharmaceuticals, food & beverages, cosmetics, and chemicals to efficiently fill liquid or semi-liquid products into bottles of various shapes and sizes.

Key Features:

- High-speed operation for mass production.
- Accurate volume control to prevent overfilling or underfilling.
- Compatible with different bottle types (plastic, glass, metal).
- Can handle various liquids, including water, syrups, oils, and viscous substances.

Applications:

- Pharmaceuticals (syrups, suspensions).
- Beverages (water, juices, soft drinks).
- Cosmetics (shampoos, lotions).
- Chemicals (solvents, cleaning agents).
